

# GEO Case Study

## Evaluating Notion's Visibility in ChatGPT

### A Generative Engine Optimization (GEO) Analysis

This presentation summarizes a 29-prompt study on how often Notion appears, gets cited, and is recommended inside ChatGPT.

Prepared by Darshit Kumar  
June 2026

29

Total Prompts

55.17%

Mention Rate

37.93%

Citation Rate

# Project Objective

## What this study answers

Measure Notion's visibility in ChatGPT.

Track mentions, citations, competitor presence, and recommendation strength.

Evaluate 29 prompts across brand, use-case, comparison, and buying-intent searches. Identify where Notion performs well and where competitors dominate.

# Methodology

Direct Brand Search  
5 prompts

Use-Case Search  
8 prompts

Comparison Search  
8 prompts

Buying-Intent Search  
8 prompts

Every response was logged with rank, response summary, key insight, citations, competitor mentions, and a visibility score. The study was run on 29 prompts to keep the evaluation structured and repeatable.

# Key Performance Indicators (KPIs)

Mention Rate

37.93%

Citation Rate

41.38%

Top Position Rate

1.14

Avg Visibility Score

3.89

Avg Competitors  
Mentioned

**Average Rank: 1.69**

**Strong Visibility Rate: 17.24%**

**Mentioned in Top 3: 48.28%**

# Mention and Citation Rates

Notion Mention Rate

Citation Availability

Notion appeared in 55.17% of tested prompts.  
Citations were present in 37.93% of responses.  
Direct brand searches were the most reliable for surfacing Notion.

# Competitor Landscape

Microsoft OneNote  
Most Frequent

Obsidian, ClickUp  
Second Tier

Notion is framed as  
a multi-category  
workspace tool.  
Observation

# Key Findings

Notion has moderate visibility overall, not universal dominance.

Brand searches consistently surface Notion.

Broader productivity prompts trigger more competitor overlap.

Microsoft OneNote, Obsidian, and ClickUp are the strongest recurring alternatives.

Citations appear in fewer than half of responses.

Notion is often recommended, but rarely as the only option.

# Recommendations

## Comparison Content

Publish stronger pages for Notion vs Obsidian, ClickUp, OneNote, and Confluence.

## Use-Case Content

Expand pages for students, teams, documentation, wikis, and knowledge management.

## AI-Friendly Structure

Use FAQs, comparison tables, clear headings, and concise feature breakdowns.

## Authoritative Coverage

Increase official documentation and educational content that AI systems can cite.

# Limitations

The sample size was limited to 29 prompts.

Results reflect a specific testing window and may change over time.

Prompt wording can influence response quality and ranking.

ChatGPT behavior may differ across sessions and model updates.

The study focuses on ChatGPT only, not other AI search platforms.

# Conclusion

Notion shows strong brand recognition, but it competes heavily in broader productivity queries.

Across 29 prompts, Notion maintained moderate visibility, an average visibility score of 1.14, and an average rank of 1.69 where ranking applied.

## What this project demonstrates

This framework can be reused for other brands and categories.

The combination of Sheets, charts, and slides makes the project easy to publish on a resume or portfolio.

Next step: expand the prompt set and compare visibility across multiple AI platforms.
