AI RESPONSES ANALYZED

PROBLEM

Brands optimizing for “AI search” often optimize for one model’s behavior without knowing whether it generalizes — this benchmark tests whether ChatGPT and Gemini actually behave alike.

DATA

20 identical prompts across 5 search-intent categories, run against both platforms in incognito mode (no follow-ups, no personalization bias), producing 40 total AI responses for scoring.

APPROACH

Built a reproducible custom rubric (Accuracy, Completeness, Actionability) plus citation-rate tracking, then automated comparison metrics and visualizations for repeatable re-testing as models update.

INSIGHT

Gemini outperformed ChatGPT overall (4.91 vs. 4.63) and cited sources dramatically more often (85% vs. 10%), while both were equally accurate (5.0) and equally likely to recommend a specific product (55%).

RECOMMENDATION

Treat single-model GEO strategy as a blind spot: prioritize authoritative, well-structured, comprehensive content for Gemini-style retrieval while keeping key facts concisely extractable for ChatGPT — and re-run this benchmark quarterly as models update.
