

Evaluating Notion’s Visibility Inside ChatGPT

A 29-prompt Generative Engine Optimization (GEO) audit across 4 real search-intent categories

55.17%

MENTION RATE

37.93%

CITATION RATE

48.28%

TOP-3 VISIBILITY

1.69

AVG. RANK

PROBLEM

SaaS companies have no visibility into whether AI assistants like ChatGPT actually recommend them when prospective users ask discovery, comparison, or buying questions — a growing blind spot as AI-mediated discovery scales.

DATA

29 structured prompts spanning Brand (5), Use-Case (8), Comparison (8), and Buying-Intent (8) searches, tested directly against ChatGPT and logged for rank, citation, and competitor presence.

APPROACH

Every response was scored for mention, citation, competitor overlap, and a custom visibility score, then aggregated into KPI dashboards to quantify performance across intent categories rather than anecdotal spot-checks.

INSIGHT

Notion shows moderate, not dominant, visibility — strong on direct brand search, but broader use-case and comparison prompts leak share to Microsoft OneNote, Obsidian, and ClickUp, the three most frequently surfaced alternatives.

RECOMMENDATION

Build head-to-head comparison content (vs. Obsidian, ClickUp, OneNote, Confluence), expand use-case pages for students/teams/wikis, and structure content (FAQs, comparison tables) so AI systems have something concrete to cite.
