

Technical SEO & Competitive Audit — Zapier

A full-funnel technical, content, and competitive SEO audit across 5 core pages and 5 direct competitors

9.1/10 OVERALL SEO SCORE	DR 91 DOMAIN RATING	~10M BACKLINKS	32 PRIORITY KEYWORDS
--	---	--------------------------------------	--

PROBLEM

Even category leaders need to know precisely where their SEO foundation has cracks before a fast-moving competitor exploits them — this audit stress-tests Zapier's position against 5 direct competitors.

DATA

5 representative pages (Homepage, Pricing, AI, Integrations, Blog) audited across 14+ technical SEO dimensions, plus a full backlink profile and keyword landscape benchmarked against Make, n8n, Power Automate, Workato, and IFTTT.

APPROACH

Structured technical audit, 32 keywords organized into 7 topical clusters, and competitive/keyword-gap analysis, synthesized into 12 dashboards and a prioritized roadmap rather than an unranked issues list.

INSIGHT

Zapier's technical foundation is excellent (DR 91, ~95K referring domains, ~10M backlinks) — the real opportunity isn't fixing technical debt, it's expanding topical authority in enterprise and AI-automation content where Microsoft and Workato are closing in.

RECOMMENDATION

A sequenced 90-day roadmap: Days 1-30 technical polish (structured data, text-to-HTML ratio); Days 31-60 content expansion (enterprise, AI education); Days 61-90 competitive content (comparison pages, workflow templates).
